1 Construction 2.10

Construct a quadrilateral MORE where $MO = 6, OR = 4.5, \angle M = 60^\circ, \angle O = 105^\circ$ and $\angle R = 105^\circ$.

2 SOLUTION

Given

$$\angle M = 60^\circ = \theta \tag{2.0.1}$$
$$\angle O = 105^\circ = \alpha \tag{2.0.2}$$
$$\angle R = 105^\circ = \delta \tag{2.0.3}$$
$$\|\mathbf{O} - \mathbf{M}\| = 6 = a, \tag{2.0.4}$$
$$\|\mathbf{R} - \mathbf{O}\| = 4.5 = b, \tag{2.0.5}$$
$$\mathbf{M} = \begin{pmatrix} 0 \\ 0 \end{pmatrix}, \mathbf{O} = \begin{pmatrix} 6 \\ 0 \end{pmatrix} \tag{2.0.6}$$

Let

$$\|\mathbf{R} - \mathbf{E}\| = c \tag{2.0.7}$$
$$\|\mathbf{M} - \mathbf{E}\| = d \tag{2.0.8}$$
$$\|\mathbf{M} - \mathbf{R}\| = e \tag{2.0.9}$$
$$\theta = \theta_1 + \theta_2 \tag{2.0.10}$$
$$\delta_1 = \angle ERM \tag{2.0.11}$$
$$\delta_2 = \angle ORM \tag{2.0.12}$$
$$\gamma = \angle E \tag{2.0.13}$$

Lemma 2.1. *If three angles and two sides of a quadrilateral are known, then the coordinates of the vertices can be expressed as*

$$\mathbf{R} = \mathbf{O} + b \times \begin{pmatrix} \cos\alpha \\ \sin\alpha \end{pmatrix} \tag{2.0.14}$$
$$\mathbf{E} = d \begin{pmatrix} \cos\theta \\ \sin\theta \end{pmatrix} \tag{2.0.15}$$

where

$$d = e \times \left(\frac{\sin\left(\delta - \sin^{-1}\left[\sin\alpha \times \left(\frac{b}{e}\right)\right]\right)}{\sin\left(360^\circ - (\alpha + \theta + \delta)\right)} \right) \times \tag{2.0.16}$$

and

$$e = \sqrt{a^2 + b^2 - 2 \times a \times b \cos\alpha} \tag{2.0.17}$$

Proof.

$$\gamma = 360^\circ - (\alpha + \theta + \delta) \tag{2.0.18}$$

Now, using cosine formula in $\triangle MOR$ we can find e:

$$e^2 = a^2 + b^2 - 2 \times a \times b \cos\alpha \tag{2.0.19}$$

Using sine rule,

$$\frac{\sin\alpha}{e} = \frac{\sin\delta_2}{b} \tag{2.0.20}$$
$$\delta_2 = \sin^{-1}\left[\sin\alpha \times \left(\frac{b}{e}\right)\right] \tag{2.0.21}$$
$$\tag{2.0.22}$$

Now in $\triangle MER$,

$$\delta_1 = \delta - \delta_2 \tag{2.0.23}$$

Using sine law of triangle,

$$\frac{\sin\gamma}{e} = \frac{\sin\delta_1}{d} \tag{2.0.24}$$
$$\implies d = e \times \left(\frac{\sin\delta_1}{\sin\gamma} \right) \tag{2.0.25}$$

From the above equations, we get

$$d = e \times \left(\frac{\sin\left(\delta - \sin^{-1}\left[\sin\alpha \times \left(\frac{b}{e}\right)\right]\right)}{\sin\left(360^\circ - (\alpha + \theta + \delta)\right)} \right) \times \tag{2.0.26}$$

where

$$e = \sqrt{a^2 + b^2 - 2 \times a \times b \cos\alpha} \tag{2.0.27}$$

□

Calculating the co-ordinates of **R**:
Putting the values in the above equation we get,

$$\implies \mathbf{R} = \begin{pmatrix} 6 \\ 0 \end{pmatrix} + 4.5 \begin{pmatrix} \cos 105^\circ \\ \sin 105^\circ \end{pmatrix} \tag{2.0.28}$$

$$\implies \mathbf{R} = \begin{pmatrix} 6 \\ 0 \end{pmatrix} + \begin{pmatrix} 1.16 \\ 4.35 \end{pmatrix} \tag{2.0.29}$$

$$\mathbf{R} = \begin{pmatrix} 7.16 \\ 4.35 \end{pmatrix} \tag{2.0.30}$$

Calculating the co-ordinates of **E**:
Putting the values in the above equation we get,

$$\implies \mathbf{E} = 7.34 \begin{pmatrix} \cos 60 \\ \sin 60 \end{pmatrix} \tag{2.0.31}$$

$$\implies \mathbf{E} = \begin{pmatrix} 3.67 \\ 6.36 \end{pmatrix} \tag{2.0.32}$$

Now, we have the coordinate of vertices M,O,R,E as,

$$\mathbf{M} = \begin{pmatrix} 0 \\ 0 \end{pmatrix}, \mathbf{O} = \begin{pmatrix} 6 \\ 0 \end{pmatrix}, \mathbf{R} = \begin{pmatrix} 7.16 \\ 4.35 \end{pmatrix}, \mathbf{E} = \begin{pmatrix} 3.67 \\ 6.36 \end{pmatrix}. \tag{2.0.33}$$

On constructing the given quadrilateral on python we get:
